PROJECT

BookMySeat – Bus Ticket Booking System	2025
Developed a full-stack bus ticket booking web application inspired by RedBus using MongoDB, Express.js, React (Vite), and Node.js. The platform supports user and admin roles with features such as bus search (From–To–Date), real-time seat selection, fare calculation, booking management, and coupon integration. Designed responsive UI with modern layouts and implemented RESTful APIs for authentication, bus management, and booking operations.	
Food Waste Management	2025
Developed a responsive web application using HTML, CSS, and JavaScript to help users manage and reduce household food waste. The system allows users to add, edit, and track food items with expiry dates, and gives timely visual alerts when items are close to expiring. Implemented an interactive UI for inventory display, search filtering, and item categorization, enabling users to monitor waste patterns and reduce unnecessary purchases	
Digital Wallet UPI Payment System	2025
Developed an online wallet and UPI-based payment system using Java and Spring Boot that allows users to create accounts, add money to their wallet, and transfer funds to other users through UPI ID. Implemented features for wallet balance checking, transaction processing, money requests, and transaction history display. Created REST endpoints for payment operations and used Spring Boot modules for handling authentication, user sessions, and input validation. Designed the interface to show real-time balance updates, payment status, and recent activity.
